PROFESSIONAL SUMMARY

Software engineer with **5+ years** building high-scale distributed systems across fintech, e-commerce, healthtech, and cloud/AI infrastructure. Experienced in designing microservices, platform solutions, and AI-powered automation that cut costs, improve resilience, and accelerate delivery, including LLM-based tooling that automates workflows at scale. Proficient in Go, Java, Python, and cloud-native stacks (AWS, Kubernetes), with a focus on shipping reliable, production-grade systems in AI-first environments.

TECHNICAL SKILLS

Languages/Frameworks: Java, Python, Go, TypeScript · Prompt Engineering, MCPs, Spring Boot, Next.js, Flask, JUnit, Pytest

Cloud/Databases: AWS, Kubernetes, Docker, CI/CD (Jenkins, GitHub Actions) · PostgreSQL, DynamoDB, MySQL, NoSQL

Architecture/Tools: Microservices, SOA, HLD, LLD, REST · Cursor, Claude Code, Codex, VS Code, IntelliJ, Maven, Gradle

PROFESSIONAL EXPERIENCE

Nutanix – NASDAQ-listed enterprise cloud infrastructure leader; ~\$2.15 billion in annual revenue

Bengaluru, India

Member of Technical Staff - 3

Mar 2024 – Apr 2026

- Architected the onboarding service for Nutanix Cloud Manager (NCM), unifying 4 different Nutanix offerings onto a single multi-provider integration layer, reducing per-product overhead and cutting ~30% costs for all enterprise customers.
- Designed a Claude agentic skill to automate bug RCAs, reducing on-call team size by 66%, improving productivity by 10x.
- Engineered an NATS-based async notification service processing 75K+ events across 25K concurrent workflows, reducing inter-service coupling and enabling independent downstream scaling without shared failure domains.

Stack: Go, Python, PostgreSQL, Kubernetes, Docker, NATS, AWS, GCP, VMware, Azure, Nutanix

Blink Health – U.S. digital health firm; 300+ employees, 35K+ pharmacy partners, ~\$1.6B valuation

Bengaluru, India (Remote)

Software Engineer

Mar 2023 – Mar 2024

- Spearheaded a full-stack pharmacy partner portal processing 9M+ prescription claims/day across 20K pharmacy partners; scaled from pilot to 20K partners in 6 months through self-serve processing workflows.

Stack: Python, React.js, TypeScript, Next.js, Material UI, Tailwind, PostgreSQL, AWS

Amazon – Global e-commerce and cloud leader; Seller Partner Financial Technology division

Bengaluru, India

Software Development Engineer I

Oct 2021 – Mar 2023

- Designed and launched an invoicing validation service (10M+ req/month) post data-source migration with zero production incidents at go-live, ensuring complete data integrity across 2M+ active vendors.
- Built a shared mock-response library across all team services, enabling downstream API simulation during outages and raising the deployment success rate by 30%.

Stack: Java, Spring Framework, AWS, DynamoDB, AutoML, HLD, LLD, Microservices

JPMorgan Chase & Co. – Global investment bank; Investment & Commercial Banking division

Bengaluru, India

Software Engineer I

Aug 2020 – Oct 2021

- Built a trade messaging system processing 1.8T+ daily pipeline events, enabling zero-downtime migration of relational DB records to JSON/XML across live downstream services.
- Built a mock-response library that raised the deployment success rate from 70% to 95% across 60+ microservices; adopted org-wide by 6 teams, enabling reliable downstream API simulation during outages.

Stack: Java, Spring Boot, JUnit, MySQL, Elasticsearch, Jenkins CI/CD, Microservices

EDUCATION

Malaviya National Institute of Technology (MNIT)

Jaipur, India

B.Tech, Computer Science & Engineering

Aug 2016 – May 2020

- **Coursework** – Artificial Intelligence, Neural Networks, Data Structures, Algorithms, DBMS

PROJECTS

- **Auto-Job Tracker** – An AI-assisted application to fetch relevant job postings from different job boards like LinkedIn with resume tailoring and a ready-to-apply notification/feed given right to the user via e-mail/WhatsApp.
- **College QnA Chatbot** – The college's first AI-powered Q&A chatbot using Transformer architecture (pre-GPT era, 2019).
